Fluid Phase Equilibria 120 (1996) 215

FLUID PHASE EQUILIBRIA

Contents of Volume 120 (1996)

Vol. 120, Nos. 1–2

Equilibrium properties: theoretical papers

Prediction of vapor–liquid equilibria at high pressures using activity coefficients at infinite dilution
V. Feroiu and D. Geană (Bucharest, Romania) 1–10

Phase equilibria of poly(ethylene–co-vinyl acetate) copolymers in subcritical and supercritical ethylene and ethylene–vinyl acetate mixtures
B. Folie (Baytown, TX, USA), C. Gregg (Annandale, NJ, USA) (Darmstadt, Germany), G. Luft and M. Radosz (Baton Rouge, LA, USA) 11–37

Effective potential approach to bulk thermodynamic properties and surface tension of molecular fluids. I. Single component n-alkane systems
R. Penfold (Liverpool, UK), S. Abbas and S. Nordholm (Göteborg, Sweden) 39–67

Association model of fluids. Phase equilibria in sulphur dioxide mixtures
I. Nagata and K. Gotoh (Kanazawa, Japan) 69–80

Computer simulation of the supercritical carbon dioxide fluid (II) internal energy and structure of carbon dioxide system containing one benzene molecule
J.-W. Shen, O. Kitao and K. Nakanishi (Kyoto, Japan) 81–92

A new method for tieline calculations in binary fluid systems
A.M. Haseeb (Washington, DC, USA), M. Keskin (Tokat, Turkey), I.L. Pegg (Washington, DC, USA) and P.H.E. Meijer (Tokat, Turkey) 93–105

Simulation studies on mixtures of dipolar with nonpolar linear molecules. II. A mixing rule for the dipolar contribution to the Helmholtz energy
A. Müller, J. Winkelmann (Merseburg, Germany) and J. Fischer (Wien, Austria) 107–119

Phase behaviour of globular protein and flexible polymer in an aqueous medium
M. Yu and J. De Swaan Arons (Delft, The Netherlands) 121–129

Activity coefficients in concentrated electrolytes: a comparison of the Brunauer–Emmett–Teller (BET) model with experimental values
M.R. Ally and J. Braunstein (Oak Ridge, TN, USA) 131–141

Equilibrium properties: experimental papers

Vapor–liquid equilibria for the system water + tert.-pentanol at 4 temperatures
K. Fischer (Oldenburg, Germany), I. Shulgin (Minsk, Byelarus), J. Rarey and J. Gmehling (Oldenburg, Germany) 143–165

Classical, non-classical critical divergences and partial molar properties from adsorption measurements in near-critical mixtures
E.H. Chimowitz and G. Afrane (Rochester, NY, USA) 167–193

Molar excess free energy of mixing of 1-propanol or 2-propanol with cyclohexane at 298.15 and 308.15 K in terms of association model with a Flory contribution term
V. Gupta, S. Maken, K.C. Kalra and K.C. Singh (Rohtak, India) 195–203

Excess volumes of ternary mixtures of *N*,*N*-dimethylformamide–diethyl ketone–1-alkanols at 303.15 K
P. Venkatesu, B.B. Goud and M.V.P. Rao (Tirupati, India) 205–210
